Calgary Warehouse Forklift Training Programs

Calgary Warehouse Forklift Training Programs - Warehouses could be commercial, retail or industrial facilities. Their function can differ from retailing bulk products to product distribution. Regardless of the type of warehouse, staff within warehouse settings must be well trained in safety measures related to material handling and storage, loading docks, conveyor systems, and forklifts and pallet jacks. Good housekeeping is important to a safe and orderly warehouse setting.

The loading dock system is often build into the warehouse at a height from the ground making it easy to move stuff moving out and coming in of the warehouse. Employees would also unload and load materials and merchandise from the elevated docks and ramps. Particular attention should be paid to safety practice throughout this stage. To prevent falls, install yellow striping along the edge of ramps and docks. Pay attention to the area around delivery trucks which are parked at the loading dock, especially the part between dock and the truck. Be sure that truck wheels are chocked when unloading.

To distribute products in the facility, some warehouses use a conveyor system. These systems are made with moving wheels and belts that could pose a pinch point danger. Keep body parts and hair well away from conveyors to avoid injury. Elevated conveyors pose a danger to staff underneath if safety nets are absent. Staff should know how to stop conveyors in the event of emergency. Be aware of the location of emergency stop buttons and off switches. When servicing conveyors, lock out/tag out measures are mandatory.

Pallet jacks and forklifts are designed to move materials around the warehouse. Forklift operators are required to take training and be given certification. Pallet jack operators do not need certification, but should be trained on the machinery. Training courses instruct operators in the correct ways for lifting materials and transporting them to their assigned place. Neither forklifts nor pallet jacks should ever be made use of to transport or lift workers.

To allow for adequate room for machinery and individuals to pass, storage shelving and rack systems help to create an efficient and orderly work space, especially if they are correctly braced. Careful and slow placement of good is required to prevent accidents caused by products falling off the facing aisle. Aisles should be kept clear by keeping products flat and inside the shelving units. Pallets are used for stacking products. They must be in good condition, and palleted products must be baled or shrink-wrapped, whenever possible.

PPE or likewise referred to as personal protective equipment must be worn when required to help protect the employees' limbs, heads, feet and hands. Hard hats or bump caps, steel-toed shoes and gloves are common PPE.

Slippery floors that are pocked with dents and pits may present significant dangers, making good housekeeping extremely important. Warehouse floors and docks should be clear of debris oil and dirt. The area must be kept clear of boxes, baling supplies and garbage.
