Calgary Crane Safety Training

Calgary Crane Safety Training - Both crane driver as well as their supervisors should be aware of all the possible problems related to the use of an overhead crane. All over North America, there is legislation which provides regulation for the safe maintenance, operation and inspection of lifting machinery. Crane Safety courses help crane owners and managers accredit their drivers based on the provincial legislation.

Our operator safety training course will provide the crane driver trainee with all the essential knowledge and skills to be able to make lifting utilizing a crane easier and safer. Operator training actually helps to lengthen the life of cranes by ensuring crane's safe operation and high performance.

Articulated cranes under 16,000 lbs. capacity could only be operated by accredited operators. Operators have to know regarding the operational characteristics and features of the equipment. Before use, a pre-operational equipment check should be performed. There is a legal requirement to perform a pre-operational check and an inspection of the overhead conditions and work-site ground.

The manufacturer's instructions provide information about inspection and maintenance, loading and unloading of the crane. The law requires daily and annual checks. Drivers should maintain an up-to-date logbook within nearly all places. They may be required to certify equipment warranties.

It is recommended that companies add remote control devices to their cranes. Remote control enhances safety by allowing the operator an easier alternative for handling the crane.

Placing a high priority on crane safety helps a company's bottom line. Businesses which follow safe equipment practices usually enjoy greater cost savings compared to those that don't. The possibility of equipment damage and personal injury is really reduced when an operator who is well-trained is handling the crane. Safety conscious operators are much more productive leading to less times needed for loading and unloading.
