

Calgary Forklift Instructor Training

Calgary Forklift Instructor Training - Forklift Instructor training certification is recommended for forklift operators who wish to become instructors. In order to qualify for forklift instructor training, operators must be able to prove they possess a high level of knowledge about forklift machinery and have good lift truck driving skills. Instructor training usually is held at an equipment sales facility or at the campus of a junior college, community college, or technical or vocational school. Forklift manufacturing companies occasionally offer hands-on, train the trainer, practical courses.

The trainee registers for the course, they would be needed to pay the tuition fee, purchase manuals, books and other course materials, whether or not they are being instructed inside a classroom setting or at the facilities of a particular manufacturing business. Course length differs depending on the course. Participants usually should have satisfactory test scores, participation and demonstration during the program in order to qualify for trainer certification.

It is assumed that the trainee taking the instructor program will have previous experience using forklifts. The topics of ethics, teaching techniques, curriculum design and safety issues will be the primary focus throughout the instructor training course. Participants will learn how to demonstrate to their students various aspects of forklift use, like for instance moving and stacking materials or navigating the forklift in narrow aisles. Individuals participating will know how to assess student's written exams and demonstrations of their lift truck operating skills. The course goal is to prepare trainers to design and implement their very own forklift training courses.

Some self-study of the machines and manuals is needed. Trainers would be expected to create their very own curriculum, that meets regulation guidelines when it comes to subjects presented, like Safety and Operation. For instance, the subject of Safety should include an understanding of how to identify possible hazards. The subject of Operation comprises instruction about controls and instruments, maneuvering and steering, and connecting and using the fork.
